## Your Result

**Discuss Screening**

**Talk to a health care professional about the possible benefits and risks of screening for prostate cancer.**

- Having a close relative with early prostate cancer increases the risk of developing the disease.

## View Your Risk Factors

*Open any Risk Factor below to learn more about your risk and what you can change.*

Age Risk	<i>Increased Risk</i> <span>∨</span>
<p style="text-align: center;"><b>Age Risk</b></p> <p style="text-align: center;">Age 50 or older <b>Increased Risk</b></p> <p>Prostate cancer is rare in men younger than age 50. The chance of developing prostate cancer goes up as men get older.</p>	

## Ethnicity Risk

Increased Risk 

### Ethnicity Risk

African-American ethnicity  
**Increased Risk**

Prostate cancer is more common among African-American men than Caucasian men. For reasons not fully understood, African-American men with prostate cancer are more likely to die from the disease than white men.

## Family History Risk

Increased Risk 

### Family History Risk

1 relative with early PCa  
**Increased Risk**

Prostate cancer (PCa) is caused by changes in certain genes. These gene changes (variants) usually happen by chance and aren't passed from parent to child. Most men who have a close relative with prostate cancer will never develop the disease. But gene changes can run in families and increase prostate cancer risk.

## Take Your Next Steps

It's time to schedule your prostate screening.
